Lessons learned from child sexual abuse research

The "early years" message has had considerable influence, particularly in relation to child protection and early intervention, but the link between child maltreatment and adolescent offending has been relatively understudied. This contribution aims to review the empirical evidence and highlight the gaps and priorities for future research.

Child and Adolescent Psychopathology (APA)

Assessment and Evaluation of Child and Adolescent Psychopathology - an overview | ScienceDirect Topics

Children and adolescents are at risk for a variety of problems. For example, you could do an elective course on juvenile forensic psychopathology, interventions

Modeled along the lines of minority supplements, they would be used to encourage investigators in other fields (e.g., adult mental health, primary care, education, neurology) to receive training in child and adolescent mental health and thus

In other words, we need to examine how context influences a child's ability to develop and in turn how the child

As director of child and adolescent mental health services in Northern Sydney, he established a comprehensive and integrated child and adolescent mental health service. He has been conjoint professor of child and adolescent psychiatry at the University of Sydney and professor of psychology at Macquarie University.

PhD in Psychology: Clinical Science in Child and Adolescent Psychology. Our graduates are well positioned to advance basic knowledge in developmental psychopathology while developing and evaluating scientifically informed assessment, treatment, and prevention approaches.

If you have ever been concerned about your child’s mental health or behaviour, you may wish to consult your primary care physician, school psychologist, or mental health professional who can provide you with an in-depth evaluation of your child’s current situation. It is important to remember that while some problems are quite normal and expected in children, others may be signs of more serious issues requiring professional help.

American Academy of Child and Adolescent Psychiatry and Children’s Hospital Association on Oct 28, 2021

Of particular importance to the specialty of clinical child and adolescent psychology is an understanding of the basic psychological needs of children and adolescents, and how the family and other social contexts influence the socio-emotional development, adjustment, developmental progression, mental and behavioral disorders, and developmental psychopathology.

No one can live a life without any problems. Although we may be able to change some problems, we can accept and adapt to others. Recognizing and accepting problems as a normal part of life is a healthy way to cope with them. It helps us to develop resilience, the ability to bounce back from difficult situations. Resilience is an important skill that can help us to navigate life's challenges with strength and confidence.

Children and adolescents are vulnerable to a wide range of mental health issues, including anxiety, depression, and behavior problems. The American Academy of Child and Adolescent Psychiatry (AACAP) is committed to ensuring that every child and adolescent has access to high-quality mental health care.

Assessing and treating children and adolescents with mental health challenges is crucial, as their well-being and development are directly impacted by these conditions. The AAP's recommendations are based on a comprehensive assessment of the available evidence and expert consensus, aiming to provide guidance for healthcare providers and support the well-being of children and adolescents.

Common mental health problems (e.g. depression and anxiety) often emerge in adolescence, show strong levels of persistence into adulthood, and are associated with a range of negative personal and social consequences.

As director of child and adolescent mental health services in Northern Sydney, he established a comprehensive and integrated child and adolescent mental health service. He has been conjoint professor of child and adolescent psychiatry at the University of Sydney and professor of psychology at Macquarie University.

John Rosemond’s parenting guidance, "Absolutely No New Tricks to Raising Kids," published in the Dec. 5 Gazette-Times, was deeply disturbing. Rosemond writes, “A compelling body of evidence demonstrates that children who have been subjected to severe and sustained emotional, physical and sexual abuse are at significant risk for a variety of long-term problems, including behavior disorders, learning disabilities, speech and language disorders, and difficulties in social and emotional development. These problems can persist well into adulthood, affecting a child’s ability to function in all areas of life, including academic achievement, employment, and personal relationships.”

"Pre-Pandemic Peer Relations Predict Adolescents' Internalizing Response to Covid-19" was published Oct. 18 in the journal Research on Child and Adolescent Psychopathology. The first author is
