- Integrating City Planning and Environmental Improvement: Gert de Roo 2017-03-02 Since Integrating City Planning and Environmental Improvement was originally published in 1999, the practice of integrating urban physical planning and environmental quality management has been widely adopted by governments worldwide. Fully revised and updated with a new preface by editors Donald Miller and Gert de Roo and new figures throughout, this second edition reports on the experience of 23 innovative programmes from 11 countries. Mostly written by practicing planners and government officials, the book looks at a wide range of integrated approaches which have been implemented and the critical assessment of these provides lessons for local and national governments interested in setting up similar schemes and suggesting ways of further innovation. While the Rio Earth summit, Habitat II and Kyoto have been a source of global principles for improving the environmental quality of human settlements, this book explores approaches to implement these policy positions and to make these calls for action operational. Consequently, the presentation of these cases deals not only with the technical aspects of measuring and controlling environmental spillovers, but also with the institutional, political and financial aspects of these programmes.

- Sustainable Urbanization-Mustafa Ergon 2016-09-28 The rapid urbanization that began with industrialization has begun to cause many problems. New approaches are emerging today to minimize these problems and make urban areas more livable. These problems include insufficient social facilities in urban areas for increasing populations due to migration and unbalanced use of green areas, water, and energy resources due to urbanization. Careless consumption and the pollution of natural resources will cause people many more problems in the future than they do today in urban development. Many professional disciplines have noticed this unbalanced development in urban areas. Urban areas have larger populations than rural areas today. Urban areas are developed neglectfully. Sustainability is needed as a criterion for urban areas to develop in a more livable and healthy fashion. Sustainable urban development approaches are seen in many fields, ranging from land use to the use of natural resources in urban areas.

- Fixing Broken Cities-John Kromer 2009-09-10 Through the insightful lens of an experienced practitioner, this book describes the origin, execution, and impact of urban repopulation strategies—initiatives designed to attract residents, businesses, jobs, shoppers, and visitors to places that had undergone decades of decline and abandonment. The central question throughout the strategies explored in the book is who should benefit? Who should benefit from the allocation of scarce public capital? Who should enjoy the social benefits of urban development? And who will populate redeveloped areas? Kromer provides realistic guidance about how to move forward with strategic choices that have to be made in pursuing the best opportunities available within highly disadvantaged, resource-starved urban areas. Each of the cases presents strategies that are strongly influenced by geography, economics, politics, and individual leadership, but they address key issues that are major concerns everywhere: enlivening downtowns, stabilizing and strengthening neighborhoods, eliminating industrial-age blight, and providing quality public education options.

- Urban Complexity and Spatial Strategies-Patsy Healey 2006-12-15 Urban Complexity and Spatial Strategies develops important new relational and institutionalist approaches to policy analysis and planning, of relevance to all those with an interest in cities and urban areas. Well-illustrated chapters weave together conceptual development, experience and implications for future practice and address the challenge of urban and metropolitan planning and development. Useful for students, social scientists and policy makers, Urban Complexity and Spatial Strategies offers concepts and detailed cases of interest to those involved in policy development and management, as well as providing a foundation of ideas and experiences, an account of the place-focused practices of governance and an approach to the analysis of governance dynamics. For those in the planning field itself, this book re-interprets the role of planning frameworks in linking spatial patterns to social dynamics with twenty-first century relevance.

- Balanced Urban Development: Options and Strategies for Liveable Cities-Basant Maheshwar 2016-08-29 This book provides a unique synthesis of concepts and tools to examine natural resource, socio-economic, legal, policy and institutional issues that are important for managing urban growth into the future. The book will particularly help the reader to understand the current issues and challenges and develop strategies and practices to cope with future pressures of urbanisation and peri-urban land, water and energy use challenges. In particular, the book will help the reader to discover underlying principles for the planning of future cities and peri-urban regions in relation to: (i) Balanced urban development policies and institutions for future cities; (ii) Understanding the effects of land use change, population increase, and water demand on the liveability of cities; (iii) Long-term planning needs and transdisciplinary approaches to ensure the secured future for generations ahead; and (iv) Strategies to adapt the cities and land, water and energy uses for viable and liveable cities. There are growing concerns about water, food security and sustainability with increased urbanisation worldwide. For cities to be liveable and sustainable into the future there is a need to maintain the natural resource base and the ecosystem services in the peri-urban areas surrounding cities. This need is increasing under the looming spectre of global warming and climate change. This book will be of interest to policy makers, urban planners, researchers, post-graduate students in urban planning, environmental and water resources management, and managers in municipal councils.
Beyond Smart Cities—Tim Campbell 2013-07-03 The promise of competitiveness and economic growth in so-called smart cities is widely advertised in Europe and the US. The promise is focussed on global talent and knowledge economies and not on learning and innovation. But to really achieve smart cities — that is to create the conditions of continuous learning and innovation — this book argues that there is a need to understand what is below the surface and to examine the mechanisms which affect the way cities learn and then connect together. This book draws on quantitative and qualitative data with concrete case studies to show how networks already operating in cities are used to foster and strengthen connections in order to achieve breakthroughs in learning and innovation. Going beyond smart cities means understanding how cities connect, convert and manipulate relationships that grow in urban environments. Cities discussed in this book — Amman, Barcelona, Bilbao, Charlotte, Curitiba, Juarez, Portland, Seattle and Turin — illuminate a blind spot in the literature. Each of these cities has achieved important transformations, and learning has played a key role, one that has been largely ignored in academic circles and practice concerning competitiveness and innovation.

Framing Strategic Urban Projects—Willem Salet 2006-12-14 Presenting the findings of extensive research into the development of planning tools and strategies since the early 1970s, this book addresses key issues in urban development/governance and brings together a range of different national experiences. Helpfully divided into three sections, Framing Strategic Urban Projects sets out the study framework, with its social, policy and institutional contexts; uses up-to-date European case studies to highlight different planning issues, including new-urbanism, information networks and public partnerships; and finally makes good-practice recommendations. Offering a systematic comparison of a wide variety of projects and providing useful case study material of these large-scale urban projects and recommendations, this book is essential reading for planners, policy makers and students interested in how to make strategic urban projects work effectively.

Urban Planning in Sub-Saharan Africa—Carlos Nunes Silva 2015-06-03 Cities in Sub-Saharan Africa are unequally confronted with social, economic and environmental challenges, particularly those related with population growth, urban sprawl, and informality. This complex and uneven African urban condition requires an open discussion of past and current urban planning practices and future reforms. Urban Planning in Sub-Saharan Africa gives a broad perspective of the history of urban planning in Sub-Saharan Africa and a critical view of issues, problems, challenges and opportunities confronting urban policy makers. The book examines the rich variety of planning cultures in Africa, offers a unique view on the introduction and development of urban planning in Sub-Saharan Africa, and makes a significant contribution against the three-sections Framing Strategic Urban Projects sets out the study framework, with its social, policy and institutional contexts; uses up-to-date European case studies to highlight different planning issues, including new-urbanism, information networks and public partnerships; and finally makes good-practice recommendations. together to develop a new ‘Strategic Plan’ for Milan’s urban region. Informed by innovative conceptions of both how to understand cities in the contemporary world and how to engage in strategic urban design in the light of recent experience has already attracted considerable international attention. The authors now consolidate their contribution into a comprehensive account which continually relates theory and practice Examining the Milan Plan in detail, the book explains the profound transformations which put great pressure on the traditional descriptive tools so planners must engage in the production of new ones. It also proposes that these transformations affect the way in which urban policies and planning processes are designed. The project offers insights into - and new directions for - planning theory more generally, while at the same time testing this powerful and innovative research hypothesis in an important European city empirical study. In detailing the results of this project, this book proposes useful ground-breaking approaches to planning for similar urban regions.

Cities, Culture and Creativity-UNESCO 2021-05-25 Culture and creativity have untapped potential to deliver social, economic, and spatial benefits for cities and communities. Cultural and creative industries are key drivers of the creative economy and represent important sources of employment, economic growth, and innovation, thus contributing to city competitiveness and sustainability. Through their contribution to urban regeneration and sustainable urban development, cultural and creative industries make cities more attractive places for people to live in and for economic activity to develop. Culture and creativity also contribute to social cohesion at the neighborhood level, enable creative networks to form and advance innovation and growth, and create opportunities for those who are often socially and economically excluded. The ongoing COVID-19 pandemic has had a deep impact on the cultural sector, yet it has also revealed the power of cultural and creative industries as a resource for city recovery and resilience. More than ever, cities are hubs of culture and have a critical role to play in harnessing the transformative potential of cultural and creative industries through policies and enabling environments at the local level. ‘Cities, Culture, and Creativity’ (CCC) provides guiding principles and a CCC Framework, developed by UNESCO and the World Bank, to support cities in unlocking the potential of cultural and creative industries for sustainable urban development, city competitiveness, and social inclusion. Drawing from global studies and the experiences of nine diverse cities from across the world, the CCC Framework offers concrete guidance for the range of actors – city, state, and national governments; creative industry and related private-sector organizations; creatives; culture professionals and civil society – to harness culture and creativity with a view to boosting their local creative economies and building resilient, inclusive, and dynamic cities.

Planning for Growth-Fulong Wu 2015-01-09 Planning for Growth: Urban and Regional Planning in China provides an overview of the changes in China’s planning system, policy, and practices using concrete examples and informative details in language that is accessible enough for the undergraduate but thoroughly grounded in a wealth of research and academic experience to support academics. It is the first accessible text on Chinese urbanization and economic growth, the new forms of planning, such as the ‘strategic spatial plan’ and ‘urban cluster plans’, that have emerged and stimulated rapid urban expansion and transformed compact Chinese cities into dispersed metropolises. And goes on to explain the new planning practices that began to pay attention to eco-cities, new towns and new development areas. Planning for Growth: Urban and Regional Planning in China demonstrates that planning is not necessarily an ‘enemy of growth’ and plays an important role in Chinese urbanization and economic growth. On the other hand, it also shows planning’s limitations in achieving a more sustainable and just urban future.

Spatial Planning and Urban Development in the New EU Member States-Uwe Altorck 2017-03-02 Accession to the EU in May 2004 was a historic milestone for the spatial and urban development of the new member states. Meanwhile, the social and economic transition during the pre-accession phase already brought about radical changes in national urban systems and new challenges for regional development. In this edited volume, a carefully selected and specially commissioned set of articles, written by experts from both the new and the old EU member states, presents a comprehensive assessment of emerging political and planning solutions at national, regional, and EU levels. Topics include brownfield redevelopment in the Czech Republic, urban sprawl in Hungary, the upgrading and integration of marginalized Roma settlements in Eastern Slovakia and sustainable coastal management in Cyprus.

Place-making and Urban Development-Pier Carlo Palermo 2014-12-05 The regeneration of critical urban areas through the redesign of public space with the intense involvement of local communities seems to be the central focus of place-making according to some widespread practices in academic and professional circles. Recently, new expertise maintains that place-making could be an innovative and potent tool, competing with more traditional disciplines like urban planning, urban design, architecture and others. This book affirms that the question of ‘making better places for people’ should be understood in a broader sense, as a symptom of the non-contingent limitations of the urban and spatial disciplines. It maintains that research should not be oriented only towards new technical or merely formal solutions but rather towards the profound rethinking of disciplinary paradigms. In the fields of urban planning, urban design and policy-making, the challenge of place-making provides scholars and practitioners a great opportunity for a much-needed critical review. Only the substantial reappraisal of long-standing (technical, cultural, institutional and social) premises and perspectives can truly improve place-making practices. The pressing need for place-making implies trespassing undue disciplinary boundaries and experimenting a place-based approach that can innovate and integrate planning regulations, strategic spatial visioning and urban development projects. Moreover, the place-making challenge compels urban experts and policy-makers to critically reflect upon the physical and social contexts of their interventions. In this sense, facing place-making today is a way to renew the civic and social role of urban planning and urban design.

An Overview of Urban and Regional Planning-Fasar Ergen 2018-12-19 Urban and regional planning is a spatial and potentially practice that brings limitations to the intervention in natural areas to ensure a balance between population growth, housing, and employment in residential areas. It includes spatial design that enables living creatures to live while planning the interventions to ensure suitability to ecology, geology, climate, and land structure since intervention in nature should be balanced. In this context, the profession generally includes regional, spatial and urban planning, urban transformation that involves the urban decline areas in the city, urban renewal and protection, urban transportation, and urban management. Therefore, it is believed that this book will be useful for those who work in this area on a practical or academic basis and follow the innovations in the profession.

Urban Planning in North Africa-Carlos Nunes Silva 2016-07-07 There has been relatively little written on the history of urban planning in North Africa, despite the wealth of towns and cities in this region which date back to Antiquity. The book explores the history of urban planning in North Africa and the challenges confronting contemporary urban planning in Algeria, Egypt, Libya, Morocco, and Tunisia. It examines the transnational flow of planning ideas during the colonial period, namely through the French, British, and Italian colonial presence, and the Portuguese and Spanish
influences as well, and discusses key challenges currently confronting urban planning in the major urban centers in the region. The fifteen chapters that constitute the book offer an informed analysis of the history of urban planning in North Africa, covering the pre-colonial, colonial and post-colonial periods.
