Lever's Histopathology of the Skin—David E. Elder 2009 Lever's Histopathology of the Skin is a classic, comprehensive work that has been used by generations of dermatopathologists, pathologists, and dermatologists to further their knowledge, in their current practices, and in the training of their students. The pathophysiologic organization is based on Walter Lever's original scheme, with appropriate modifications over the years, and is more efficient than the pattern method, since related entities are discussed in juxtaposition. This edition contains over 1,400 full-color illustrations, including photomicrographs and clinical photographs of diseases not covered in previous editions. The chapter on algorithmic pattern recognition has been expanded and extensively cross-referenced to the chapters on diseases to aid readers in generating differential diagnoses for unknown cases. A companion Website will offer the fully searchable text and an image bank.

The Ichthyoses-Heiko Traupe 2012-12-06 It is a great pleasure for me to see this work in print. As outlined by Dr. Traupe, at least 20 different types of ichthyosis have been identified to date. This book will effectively help to establish a correct diagnosis, as a basis for genetic counseling. Dr. Traupe proposes a new classification of the ichthyoses, based on reasonable clinical criteria. He lets the reader share in his enormous knowledge and safely guides him through the difficult field of nomenclature. He describes the particular nature of these scaling disorders in a manner as simple as possible. During the last few years, research on ichthyosis has become a fascinating scientific challenge due to the introduction of novel investigative approaches. The main advantage of this book lies in the fact that the author successfully combines recent achievements made in lipid analysis, enzymology, electron microscopy, and molecular genetics. Heiko Traupe began his career in dermatology 11 years ago, as a resident in the Department of Dermatology in Munster. As we were both interested in the genetic aspects of skin diseases, this was the starting point of a most fruitful collaboration, which is still continuing. During our common work in Munster, Dr. Traupe was able, thanks to his unceasing clinical curiosity, to describe many novel aspects within the field of ichthyosis, and I took pride in coauthoring papers on new items such as cryptorchidism as a feature associated with X-linked recessive ichthyosis, autosomal dominant lamellar ichthyosis, and alopecia ichthyotica.

The Etiology of Atopic Dermatitis-Herbert B. Allen 2014-10-29 This book
will present completely new, unique findings in eczema: sweat ducts that
become occluded with staphylococcal biofilms trigger the innate immune
system with TLR2 receptor activity and this leads to production of the
“itching” and inflammation in this disease. Dermatologists and pediatricians
treat eczema exceedingly well and this is ordinarily accomplished with
corticosteroid containing topicals. However, after treatment, it is intriguing
that aggressive moisturization and cautious bathing will in most instances
prevent future flares of the disease, even though it is precipitated by
bacteria and their biofilms. Diseases where eczema has been found with a
completely unrelated disorder have shown occluded sweat ducts on
histopathologic examination. These include Meyerson’s nevus which has a
nevus and eczema in the same biopsy and Doucas Kapetanakis-type of
pigmented purpuric dermatosis that shows occluded sweat ducts along with
the capillaritis.
