Lo sviluppo territoriale nell'economia della conoscenza: teorie, attori, strategie.-AA. VV. 2009-09-01T00:00:00+02:00 1390.42

Globalization and Regional Growth in Europe-Roberta Capellini 2011-05-27 After a description of the new forms of globalization currently shaping our world, and of their possible spatial effects, the book highlights which European regions have in the past succeeded in taking advantage of globalization trends and identifies the major reasons for their success. The book also offers a prospective analysis utilizing scenarios based on different assumptions of how globalization trends will develop, identifying the regional winners and losers for each scenario. The analysis greatly benefits from a unique database which contains, among others, data on FDI by sector and professions at the regional Nuts-2 level for all 27 EU countries. A time-span of more than 10 years is covered, and scenarios are developed for the future development up to 2020.

Computational Science and Its Applications – ICCSA 2013-Osvaldo Gervasi 2013-05-14 The five-volume set LNCs 9150-9159 constitutes the refereed proceedings of the 15th International Conference on Computational Science and Its Applications, ICCSA 2013, held in Banff, AB, Canada, in June 2013. The 322 revised full papers presented in 22 workshops and a special track were carefully reviewed and selected from 780 initial submissions for inclusion in this volume. They cover various areas in computational science ranging from computational science technologies to specific areas of computational sciences such as computational geometry and security.

Knowledge-creating Milieus in Europe-Sanjay Misra 2012-06-28 The six volumes LNCS 7986-7991 constitute the refereed proceedings of the 19th International Conference on Computational Science and Its Applications, ICCSA 2012, held in Berlin, Germany, in June 2012. The four-volume set LNCs 7333-7336 constitutes the refereed proceedings of the 14th International Conference on Computational Science and Its Applications, ICCSA 2012, held in Salvador de Bahia, Brazil, in June 2012. The four volumes contain papers presented in the following workshops: 7333 - advances in high performance algorithms and applications (ARAP); biomedical imaging and applications (ARIMA-I), computational sciences and engineering (ARCS), computer sciences and education (ARCS-E), computer sciences and engineering (CTP), 7334 - econometrics and multidimensional evaluation in the urban environment (EMEUE): geographical analysis, urban modeling, spatial statistics (Geo-An-Mod); 7335 - optimization techniques and applications (OTA); mobile communications (MC), mobile-computing, sensor and actuators for cyber physical systems (McSAPs); sensor-based wireless systems (SSB); 7336 - software engineering processes and applications (SEPA); software quality (SQ); security and privacy in computational sciences (SpoC); soft computing and data engineering (SDE), The topics of the fully refereed papers are structured according to the major conference themes: geographical analysis, urban modeling, spatial statistics; cities, technologies and planning; computational geometry and applications; computer aided modeling, simulation, and analysis; and mobile communications.

Mediterranean Cities and Island Communities-Andreas Strangis 2013-05-14 This book addresses the issue of smart and sustainable development in the Mediterranean (MED) region, a distinct part of the world, full of challenges and risks but also opportunities. Above all, the book focuses on Softening up small and medium-sized cities and island communities, by integrating their geographical peculiarities, the patterns of MED urban settlements and the abundance of natural and cultural complements in the MED Basin. Taking for granted that sustainability in the MED is the overarching policy goal that needs to be served, the book explores different aspects of smartness in support of this goal's achievement. In this respect, evidence from concrete smart developments adopted by forerunners in the MED region is collected and analyzed; coupled with experiences from successful, non-MED, examples of smart efforts in European countries, this book aims to present a unique and innovative approach to smartness in the MED region. The book's primary goal is to enable urban planners, decision-makers and people to recognize the challenges and options available and to make more informed policy decisions towards smart, sustainable, inclusive and resilient urban and regional futures in the MED.

Knowledge-creating Milieus in Europe-Sanjay Misra 2012-06-28 The six volumes LNCS 7986-7991 constitute the refereed proceedings of the 19th International Conference on Computational Science and Its Applications, ICCSA 2012, held in Berlin, Germany, in June 2012. The four-volume set LNCs 7333-7336 constitutes the refereed proceedings of the 14th International Conference on Computational Science and Its Applications, ICCSA 2012, held in Salvador de Bahia, Brazil, in June 2012. The four volumes contain papers presented in the following workshops: 7333 - advances in high performance algorithms and applications (ARAP); biomedical imaging and applications (ARIMA-I), computational sciences and engineering (ARCS), computer sciences and education (ARCS-E), computer sciences and engineering (CTP), 7334 - econometrics and multidimensional evaluation in the urban environment (EMEUE): geographical analysis, urban modeling, spatial statistics (Geo-An-Mod); 7335 - optimization techniques and applications (OTA); mobile communications (MC), mobile-computing, sensor and actuators for cyber physical systems (McSAPs); sensor-based wireless systems (SSB); 7336 - software engineering processes and applications (SEPA); software quality (SQ); security and privacy in computational sciences (SpoC); soft computing and data engineering (SDE), The topics of the fully refereed papers are structured according to the major conference themes: geographical analysis, urban modeling, spatial statistics; cities, technologies and planning; computational geometry and applications; computer aided modeling, simulation, and analysis; and mobile communications.

Seminal Studies in Regional and Urban Economics-Roberto Capellini 2017-01-04 The book spans a scientific research program elegantly developed by Roberto Capellini, an eminent regional scientist, who has offered ground-breaking ideas in regional and urban economics throughout his academic career. In addition to bringing together a selection of Professor Capellini’s most influential works, the book presents syntheses and interpretations of his ideas by respected colleagues and by his students. In regional economics, space as territory, which plays an active role in innovation processes and in regional growth patterns; territorial capital as a synthetic concept of differentiated regional growth assets; and sources of regional competitiveness are only a few of the main ideas that emerged in regional economics thanks to his thought on the existence of the city and its dynamics. His theories on how cities network overcomes the limits of Christaller’s and Lösch’s spatial approach to the city, with a solid economic conceptualization of spatial city network structures.

Goverance, Development and Conflict-Maas Chatterji 2011-08-17 A considerable amount of work has been conducted in the field of peace studies, conflict management, peace science, conflict resolution, and diplomacy and technology. This title presents research with an emphasis on theoretical and mathematical constructs in the area of peace economics & peace science.

Knowledge-creating Milieus in Europe-Augusto Cusinato 2015-08-26 This book introduces a radically spatialised approach to knowledge creation and innovation. Reflecting on an array of European urban and regional developments, it offers an updated notion of milieu as the conceptual and material space of knowledge and the knowledge-based era it is creating, on key facets of living, working, learning, innovating, and collaborating in today's hyper-complex world.

Specificamente, il libro esplora i diversi aspetti del rapporto tra l'energia e la città, discussi metodologici e problemi con un approccio onologico alla sostenibilità, e descrive pratiche, strumenti, e buoni esempi di energia nella pianificazione urbana. I responsabili rappresentano i rappresentanti di massima di ricerca del mondo, l'Italia offrendo un esempio di un paese esposto a problemi energetici come, ad esempio, l'incapacità di cambiare la visione dell'energia e di tuffarsi nel cambiamento. Questo libro sarà utile per studenti di urbanistica, planner, e ricercatori interessati a comprendere il cambiamento della natura del paese e le sfide suscitate da varie energie.

**Sviluppo locale, Europa,nazionalismi. Territorio e globalizzazione in una prospettiva critica**

Andrea Giannotti 2019-10-08 Il concetto di sviluppo territoriale si è evoluto in maniera profonda. Non è più misurato unicamente sulla sua dimensione economica, ma anche su quella politica e sociale. L'attuale visione dello sviluppo ha superato la mera crescita per estendersi all'ambiente, all'innovazione, al capitale sociale e relazionale. Il territorio costituisce la curvatura toroidale dello sviluppo. Il territorio è, infatti, il nucleo dell'iniziativa dei vari attori che implementano lo sviluppo e delle interazioni alle - e tra le - diverse scale. La crescita di importanza della città assume quindi un valore strategico. L'imperativo di spirito nazionalista e sovrannazionale impone la riuscita delle politiche pubbliche in ambito europeo e delle nazioni che ripropongono la centralità degli Stati nei confronti della crescita dell'apporto di legge dell'Unione Europea alle regioni. Uno scenario che, in sintesi, con il contrasto fenomeno della globalizzazione e con la rilevanza acquisita dalle città, offre spazi di maniera alle forze che sostennero il ritorno al primo dell'ordine nazionale.

**Agroecology**

Massimo Monteduro 2015-01-06 This book represents a first attempt to investigate the relations between Law and Agroecology. There is a need to adopt a transdisciplinary approach to multifunctional agriculture in order to integrate the agroecological paradigm in legal regulation. This does not require a super-law that hierarchically purports to incorporate and supplant the existing legal fields, rather, it calls for the creation of a trans-law that progressively works to coordinate interlegalities between different legal fields, respecting their autonomy but emphasizing their common historical roots in rus in the process. Rus, the rural phenomenon as a whole, reflects the plurality and interdependence of different complex systems based jointly on the land as a central point of reference. "Rural" is more than "agricultural": if agriculture is understood traditionally as an activity aimed at exploiting the land for the production of material goods for use, consumption and private exchange, rurality marks the reconfiguration of agriculture into a broader sphere, one that is not only economic, but also social and cultural; not only private, but also public. In approaching rus, the natural and social sciences first became specialized, multiplied, and compartmentalized in a plurality of first-order disciplines; later, they began a process of integration into Agroecology as a second-order, multi-disciplinary and shared research platform. Today, Agroecology is a transdiscipline that integrates other fields of knowledge into the concept of agroecosystems viewed as socio-ecological systems. However, the law seems to still be stuck in the first stage. Following a reductionist approach, law has deconstructed and shattered the universe of rus into countless, disjointed legal elementary particles, multiplying the planes of analysis and, in particular, keeping Agricultural Law and Environmental Law two separate fields.

Aspetti sentiti parare di Regional Science. Un tributo a Giuliano Bianchi AA. VV. 2010-10-28T00:00:00+02:00 1390.45

La valutazione della ricerca scientifica: indicatori, qualità e impatto Giovanni Loggia 2013-06-12 «La realizzazione di un sistema di valutazione dalla qualità della ricerca è un passo indubbio per qualsiasi Paese che voglia continuare ad investire in conoscenza ed in innovazione e che intenda essere realmente competitivo sul piano globale. Nella costruzione di questo sistema non può mancare la “valutazione della valutazione”, entrando nel merito delle procedure adottate dagli Organismi preposti alla funzione e dagli aspetti metodologici che le hanno caratterizzate. Anche in questo ambito, ugualmente fondamentale per la realizzazione di un valido sistema di valutazione della ricerca pubblica, saranno necessari testi, studi, articoli, saggi che come questo prodotto da Giovanna Loggia dovranno essere semplici, diretti, idonei ad essere strumenti agili di approfondimento di problematiche estremamente importanti per il futuro dello studio della ricerca nel nostro Paese»
